Mike McDonald,
Director,
Coombedown Resources Pty Ltd,
1 Beaumont Court,
MOUNT BARKER SA 5251
Email: mikemcdonald@mpalawyers.com

Dear Mr Brown and Mr McDonald,

Notification of Approved Exploration Program for Environment Protection and Rehabilitation (EPEPR) Review

In reference to your final submission dated 2 July 2026, the EPEPR has been approved pursuant to section 70C(5) of the [Mining Act 1971](#) (the Mining Act).

The approved EPEPR will be made publicly available on the Mining Register and the Department for Energy and Mining (DEM) website. Details of the approved EPEPR are listed below.

Approval Granted to	Coombedown Resources Pty Ltd Half Moon Pty Ltd
Tenement Type & Number	Exploration License EL5998, EL6569
Program Number	EPR-04178
EPEPR Description	Marmota is proposing Phase 1 drilling at Mainwood and Golf Bore Deposits, along with Phase 3 drilling at Greenwood project. This revision is for an additional 120 holes within EL 5998 (Greenwood and Mainwood)

You are reminded that you must always implement and comply with this approved EPEPR.

This approval does not constitute endorsement of the systems that you have in place to manage the mining operations in compliance with the Mining Act. Whilst your capability to undertake this activity has been considered in this approval, the responsibility for compliance with the Mining Act always remains with the tenement holder.

MINERALS REGULATION

11 Waymouth Street, Adelaide SA 5000 | GPO Box 618 Adelaide SA 5001
Tel (+61) 8 429 2502 | ABN 83 768 683 934

The legislative requirements associated with the EPEPR are outlined below, and certain requirements must be actioned prior to commencement of operations authorised by the EPEPR.

1	Public Liability Insurance Pursuant to Regulation 81 of the Mining Regulations 2020 (the Mining Regulations), you are required to provide a copy of a certificate evidencing the insurance coverage over the tenement(s).
2	Compliance Reporting You are required to submit an annual exploration compliance report. The report is required to be submitted within 2 months after the anniversary of the date the licence/ease was granted, or in accordance with joint reporting requirements agreed to with the Minister. Please refer to the DEM website for more information on the reporting requirements. You are reminded that a separate compliance report is required 2 months after the expiry or surrender of the EL.
3	Work, Health and Safety Compliance In accordance with Chapter 10 of the <i>Work Health and Safety Regulations 2012</i> (SA), you must meet the requirements for mine operators in South Australia, which include a notification for mining operations, the establishment of a Safety Management System, the identification of Principal Mining Hazards and development of a Principal Mining Hazard Management Plan. Further information on your responsibilities, including a guide to Chapter 10, and the Mine Operator Notification Form, is available on the SafeWork SA website .
4	EPEPR Timeframe The EPEPR Review is approved for a period of twelve months from the date of this letter. A further 3 months after expiry of the 12-month period is provided to complete all rehabilitation.

Please note, proposed changes to exploration operations stated in the approved EPEPR may require a EPEPR review to be submitted for assessment. Where a EPEPR review is required, implementation of the operational changes can only occur after the revised EPEPR is approved. Further information on when an exploration PEPR review is required can be found in Departmental guideline [MG22 Conducting mineral exploration](#).

In addition to the requirements under the Mining Act, you are reminded that your operation will have other legislative requirements that you will need to comply with.

If you have any further queries, please contact DEM staff as below:

General enquiries	Jason Perry Senior Assessment Officer, Exploration Regulation DEM.exploration@sa.gov.au

Project Description

EL 5998 and EL 6569 hosts Campfire Bore, Golf Bore, Greenwood and Mainwood deposits within the Woomera Prohibited Area. Marmota is proposing Phase 1 drilling at Mainwood and Golf Bore Deposits, along with Phase 3 drilling at Greenwood project.

Proposed Project Schedule

Start Date

13/02/2026

End date

13/02/2027

Clearly describe why a PEPR review is required, summarise all content changes made to the approved PEPR, and provide appropriate justification where a time extension is required.

Marmota is currently planning to rapidly advance exploration at our Greenwood, Mainwood and Golf Bore Projects.

Previous EPEPR application and revisions included requests for the number of drillholes.

20/06/2024 300 RC Drillholes EL6569 (86 Holes drilled at Campfire Bore, all holes and rehabilitated)

19/06/2025 150 RC Drillholes EL5998 (Greenwood Phase 1, 146 holes drilled, sumps and pads and collars have been rehabilitated, Samples bags remain

27/10/2025 115 RC Drillholes EL5998 (Greenwood Phase 2)

10/12/2025 30 RC Drillholes EL5998 (Greenwood Phase 2 129 Drill holes completed. holes not rehabilitated).

Of the drillholes approved to date 214 remain un-drilled on EL6969 and 20 on EL5998

The previous approved revision was for an additional 220 drillholes within EL 5998 (Greenwood and Mainwood), with 30 holes to be added to the EPEPR for EL6569 for drilling at Golf Bore. This will provide the scope for 244 drillholes on EL 6569 and 240 drillholes for EL5998.

This revision is for an additional 120 holes within EL 5998 (Greenwood and Mainwood), which will provide scope for 360 drillholes within this EL.

Half Moon also requested an additional 12 month extension on the EPEPR to facilitate the additional drillholes and sample collection.

Program Preparation

Work undertaken in preparing the proposal

Marmota intends to complete drilling at Greenwood, Mainwood and Golf Bore and Campfire bore prospects and has undertaken desktop reviews including:

- Protected Matter Search Tool – Department of Agriculture, Water and the Environment
- Nature maps
- SARIG
- BOM (Ground Water) and Water Connect

Marmota is currently seeking contractors for proposed works

Operator Capability

Marmota and all contractors working onsite operate within the bounds of Marmota's field procedures and consultant specific field procedures, to ensure safe completion and environmentally sound operation and completion of all field programs. (Field Safety Operations Manual.doc 2015 WHS Manual.doc 2014.) A review of the field operations manual has recently been completed. Marmota staff monitor adherence to safety and environmental compliance, and Marmota has procedures in place to report safety or environmental issues. (Incident report or damage.doc, 2017, Incident Investigation Checklist.doc, 2017) Where issues arise that require reporting in accordance with regulation, Marmota will notify the department.

All staff and contractors are required to complete a site induction prior to work commencing. The induction covers site orientation safety and environmental requirements. If and where issues arise staff or contractors are reminded of the need for compliance with procedures and steps will be taken to remediate any breaches.

Marmota is in contact with all stake holders as required by legislation notices of entry and keeps a register of communications with stakeholder to ensure concerns are raised and actioned as required.

Beyond required notifications, Marmota is in regular contact with Tom Wheelhouse at Commonwealth Hill Station with regard to proposed programs and any potential issues, to avoid complaints due to field activities (Stakeholder Engagement.xlsx)

Land Access

Identify the Owners of Land and authority to access land

Land Title Reference	Plan Parcel Reference	Type of Land	Owner of Land ↑	Land Access Authorisation Method	Date of Form 21 or Agreement Signed	Instrument or Uploaded Document Id	Uncheck land not applicable to your application ar
CL 6211/286	D2856 5AL2	Perpetual Lease	Jumbuck Pastoral Commonwealth Hill Station	Service of Notice of Entry	04/01/2026		Checked
CL 6299/451	H8328 00BL734	Perpetual Lease	Jumbuck Pastoral Commonwealth Hill Station	Service of Notice of Entry	04/01/2026		Checked

Is any of the application area over a road, street or highway

No

Woomera Prohibited Area (WPA)

Will activities be conducted within the WPA

Yes

In which zone will activities be conducted?

Name	Are you intending to undertake work?	Closure start date	Closure end date
Defence infrequent zone	Yes		
Defence periodic use zone	Yes	27/02/2026	26/03/2026

Does the tenement holder hold a valid and current Resource Exploration Permit under the WPA Rule?

Yes

Permit No.

REX064-25

What is the expiry date of the permit?

11/04/2032

Does the Exploration Permit allow the operator to conduct exploration operations in the WPA?

Yes

Other Land Owned or Controlled by the Commonwealth Department of Defence

Indicate if you are intending to undertake exploration operations within the identified defence land

No

Other Commonwealth defence land

Defence Land	Applicable
There are no records to display.	

Do you have a Deed of Access with Defence?

—

Expiry date of the Deed of Access

—

Date the Range Control Officer granted permission to conduct the proposed exploration operations.

—

Describe the results of consultation and how any concerns raised were addressed

—

Native Title

Does 'Native Title land' exist within the application area?

Yes

Using the table below, describe how you have complied with the requirements of Part 9B of the Mining Act for each tenement.

Name of Determined / Claimant Group	Agreement Type	Instrument Number	Applicable
Antakirinja Matu-Yankunytjatjara			No
Antakirinja Area Minerals Exploration ILUA			No
Part Commonwealth Hill (PE 2169) Pastoral ILUA			No
Antakirinja Matu-Yankunytjatjara Aboriginal Corporation RNTBC	Native Title	Registration Number 277	Yes
Pt Woorong Downs (PE 2175) Pastoral ILUA			No

Provide any additional relevant information

—

Exempt Land

Exempt Land

Has Exempt land been identified?

No

If a "Waiver of Exemption" has been reached to waive the benefit of the exemption, a notice of the agreement must be given to the Mining Registrar, either within 21 days after the agreement was entered into or when an application for the mineral tenement is made under the Mining Act.

In the table below enter the relevant instrument numbers for any Form 23C - Notice of wavier of exemption provided to the Mining Registrar.*

Land Title	Plan Parcel	Owner of Land that has benefit of exemption ↑	Why is the land exempt land?	Waiver of exemption(s) been negotiated	Instrument Number or Uploaded Document Id
CL 6299/45 1	H8328 00BL7 34	Jumbuck Pastoral Commonwealth Hill Station			
CL 6211/28 6	D2856 5AL2	Jumbuck Pastoral Commonwealth Hill Station			

Consultation

Consultation

Stakeholder ↑	Land Use	Matters raised	Stakeholder concerns raised and how addressed
AMYAC	Other (e.g. historic mining)	Email communication with MPS Law regarding heritage survey and conditions of survey	Responded with conditions of Survey
Jumbuck Pastoral Commonwealth Hill Station	Grazing	RC Bags from a drill hole at Campfire Bore too close to station track	Green Bags moved away from Track then rehabilitated
Jumbuck Pastoral Commonwealth Hill Station	Grazing	Degradation of some access tracks.	Tracks requiring repairs have been identified in consultation with Jumbuck Pastoral, and grading of all tracks has been completed.

If any individual or group of similar affected persons were not able to be consulted, what steps were taken to consult with them?

Provide any additional relevant information.

Describe any council policies (or out of council) or development plans that may impact the program area and a description of any known plans for future land use changes by other parties.

Description of Environment

Proximity to Infrastructure and Housing

Provide the following information:

Please see attached Figure 1 for the overview infrastructure and Housing to proposed programs. Golf Bore and Campfire Bore Prospect as the crow fly's are ~100 and 115km (respectively) South West of Coober Pedy.

Updated Figure 1 with overview of infrastructure and housing for EL 5998 and EL 6569 (Campfire Bore, Golf Bore, Greenwood and Mainwood). Greenwood and Mainwood (EL 5998) are approximately ~120km South West of Coober Pedy.

Access Roads and tracks exist to the proposed drill areas and no additional tracks will be required to travel from camp to Greenwood prospect during drilling.

Other Human infrastructure exists in the general area; however all are generally some kilometres from the proposed exploration activities. Communication between Marmota and the relevant Station Managers will be ongoing during planning and drilling. Drilling will not interfere with any stock work or infrastructure. See attached Map for further details.

Landform, topography, soil and surface cover

Describe the topography and soil and surface cover (e.g. gibber) of the general area affected by the exploration program. Include details on the susceptibility to compaction, erosion, dust, runoff and visual attributes (steep or undulating slopes, plains, rocky outcrops, dunes, saltpans, claypans etc) any other characteristics (e.g. acid sulphate soils) that may require control strategies to reduce environmental impacts during operations or rehabilitation.

EL 6569 and EL 5998 are characterised by low hills and sand plains with low susceptibility to erosion and no visual disturbance after rehab.

Surface Water

Will the proposed program interfere with surface water bodies and natural drainage (e.g. drainage lines, creeks, floodplains, wetlands)?

No

Describe the potential interference and surface water bodies and natural drainage on maps.

Indicate how you will avoid disturbance

Each drillhole location will be accessed prior to drilling if drilling holes are within drainage lines/creeks they will be adjusted to a minimum of 50m from drainage line and/or creek or if no suitable location can be established they will not be included in the drilling.

Is the program area located within water protection areas defined under the River Murray Act 2003?

No

Select the name(s) of protected water areas

Is the program area located within any prescribed watercourses or prescribed surface water areas under the Landscape?

No

Select the name(s) of the prescribed watercourses or prescribed surface water areas under the Landscape South Australia Act 2019.

Groundwater

Is groundwater likely to be intersected when conducting the exploration program?

Yes

Provide evidence or any supporting information demonstrating this.

Description of the localites/areas where different groundwater conditions may be encountered

There is potential to intersect water from 18m depth at Campfire Bore. Where waterbore information is available the SWL is between 18-30m and TDS (mg/L) 800-20,000 - See below table. There is limited Data available from Water Drill holes at Golf Bore with 1 Water well within proximity to planned drilling (96 GBWB 230) and has a recorded SWL of 21m and TDS (mg/L)- 34,470. See Figure 2 - for Map of Waterbores within proximity of the drill areas.

Add the different groundwater conditions for each localities/areas to the table below.

Provide the environmental value of each aquifer present determined according to the current Environment Protection (Water Quality) Policy.

Unconfined aquifers - Recorded water bores drilled within the exploration areas have recorded TDS greater than 11,000 mg/L and would not be suitable for Primary Industries (Livestock Drinking or Aquaculture and human consumption of aquatic foods) and will not be used for any water source during drilling.

Provide a description of the existence, location and value of all Groundwater Dependent Ecosystems (GDE) within and immediately surrounding the project area

Campfire Bore and Golf Bore EL 6569 occur within the Gairdner River Region. BOM GDE data was used to evaluate the GDEs with this tenement portions.

Greenwood and Mainwood (EL 5998) also occur within the Gairdner River Region.

Aquatic GDE (as shown in Figure 3)

- There is no Aquatic GDE defined from BOM within EL 6569 Campfire Bore and Golf Bore Prospects or Mainwood and Greenwood (EL 5998)

Terrestrial GDE (as shown in Figure 4)

- EL 6569 (Golf Bore and Campfire Bore) is within Low Potential GDE from National Assessment with Vegetation Acacia Woodland, low lying, Alluvial Plains and salt lakes with some dunes.

- Mainwood and Greenwood (EL 5998) is within Low Potential GDE from National Assessment with Vegetation Acacia Woodland, low lying, Alluvial Plains and salt lakes with some dunes.

Native Vegetation

Will you be working within areas of native vegetation?

Yes

Provide the following information:

The area is predominantly an open Acacia woodland, with acacia, blue bluebush, saltbush, and senna as dominant species. Significant habitats and flora are tabulated below along with 2 maps (Figures 5 and 6.) The understory varies in response to landscape position along with changes in the near surface regolith materials and hydrology

Indicate why you will not be working within areas of native vegetation?

Fauna

Describe the native and feral fauna that may be present in the application area, including feral species.

Fauna within tenement boundaries has indicated that there is no rated Fauna. Fauna which has been observed includes Bluebonnet (Eastern and Naretha), Yellow-throated Miner and Emus as detailed in the Table below and Figures 8 and 9. Feral animals in the area may include Cats and wild dogs. Feral animals have not been observed at either of the identified areas.

Significant Habitats, Flora & Fauna

Are there any significant habitats, flora and fauna within the project area?

No

Use the table below to list any significant habitats and any rare or endangered flora and fauna species located or reported to have been in the area that may be impacted by the proposed program. Include known sightings of listed species on a locality plan/map.

Species name/habitat	Common name	NPW Act Rating	EBPC Act Rating

Figures 8 and 9_20250915_12_04_13_20251126_13_31_41_20251224_15_37_21.pdf	0.3 Mb	19-06-2026 11:44:07	Download (MERS/EP R-04178/Fauna/Figures 8 and 9_20250915_12_04_13_20251126_13_31_41_20251224_15_37_21_2026-06-19T02-14-08.285Z.pdf)

Weeds and Pathogens

Provide information of the extent the area is affected or potentially affected by weeds and pathogens (e.g. phytophthora; buffel grass *Cenchrus ciliaris*).

The exploration area occurs within the Arid Lands Natural Resources Management Region and within the KINGOONYA NRM District weed strategy (Reviewed June 2015). The Area is within a known Buffel Grass region- Zone 2 and Zone 3 on the SA Buffel Grass Strategic Plan 2019-2024. When looking at the map and Nature maps of known locations of Buffel Grass it is dominantly located along bitumen Stuart Highway and southern railway line. There are no known pathogens within the proposed drilling area as shown in Figure 7. If any infestations of Buffel Grass or other weed species are encountered during the program, cleaning procedures will be implemented when leaving the area and the infestation will be avoided and reported.

Figure 7_20250915_12_06_16_20251126_13_32_12(1)_20251224_15_38_51.jpg	0.12 Mb	19-06-2026 11:44:51	Download (MERS/EP R-04178/Weeks and Pathogens/ Figure 7_20250915_12_06_16_20251126_13_32_12(1)_20251224_15_38_51_2026-06-19T02-14-51.515Z.jpg)

Aboriginal Heritage

Describe the steps taken to identify Aboriginal heritage sites within the proposed area of exploration. Include a statement advising if an Aboriginal heritage survey has been conducted by the proponent and if so, the results of the survey.

A heritage Survey was completed in 1999 (4 Mining Lease Applications Survey) and March 1996.

Locations of Heritage Surveys and Exclusion

Zone are within Figure 11.

Conditions of 1999 Heritage Survey (4 Mining Lease Applications Survey):

GOLF BORE

"No mining should occur within either exclusion area. No camping or storage of material should occur within the exclusion areas. Both the exclusion areas should be fences along the given coordinates if mining activities are commenced within the Lease Area. Access and Road maintenance within a 50 km corridor either side of the existing track is permitted along the track between Aurora Tank, Skye Tank and Golf Bore which passes through exclusion zone 2, except where the existing track runs directly through a small salt lake on the western side of the lease. If this road is to be upgraded for heavy vehicle use in this area the road should be diverted north, around the sand dune adjacent to the salt lake. No recreational activities (such as bbq's, hunting, bike or 4X4 Driving) are permitted within the exclusion areas. Mining is permitted elsewhere in the lease outside the two exclusion areas."

CAMPFIRE BORE including EL 5998

"No mining should occur within the exclusion area. No Camping or storage of material should occur within the exclusion area. The exclusion area should be fence along the given coordinates if Mining activities are commenced within the lease area. Access and road maintenance within a 50km corridor either side of the existing track is permitted through the exclusion area. This track heads north west, south east between 'A' Tank and sandstone. Limited Access is also permitted along the track associated with the fence line passing approximately east west through the exclusion zone, although this track should not be enlarged as a main access route. No recreational activities (such as BBQ, hunting bike or 4X4 Driving) is permitted within the exclusion zone. Consideration should be given to the historic value and built fabric of sandstone homestead and the associated air raid shelter if mining proceeds in the lease area and the homestead is used for worker accommodation. Mining is permitted elsewhere in the lease outside the exclusion zone."

EL 5998: Conditions of 2017 Heritage Survey "Selected areas within Exploration Licences 5183 (Mainwood); 5720 (Brickies); and 5298

(Black Knight and Southern Areas) Survey conducted on 3–5 March 2017":

1. All drill holes are to be contained within the perimeter of the cleared survey areas
2. Access to be gained along existing tracks or fence lines as far as possible. However, in the event of track creation, this should be kept to a single defined track and done in a manner that minimises impact and be fully rehabilitated;
3. There is to be no work generally within drainage lines, clay pans, dune crests, silcrete rises or granites;
4. Vegetation disturbance must be kept to a minimum (Native Vegetation Council Guidelines) and there must be no impact on Black Oaks (*Casuarina pauper*); and
5. Observance of avoidance areas:
 - a. 50m either side of any drainage lines, creeks and waterways;
 - b. 50m from the edges of clay pans with diameters of approximately 20-50m; and
 - c. 200m from the edges of clay pans with diameters over 50m

Environmentally Sensitive Locations

Indicate if you are intending to undertake exploration operations within the environmentally sensitive locations listed.

No

Name	Applicable
There are no records to display.	

Are you likely to impact on the environmentally sensitive area?

—

Detail the likely effects the proposed program may have.

Exploration Operations

Equipment and Personnel requirements

Using the table below, describe the maximum composition of field crews (operator, contractors, and geologists) and proposed working hours/days for each type of activity.

Type of Personnel	Number	Name of contractor company (if applicable)
Geologists	1	Marmota Limited
Land access/environmental	2	Marmota Limited
Drilling Crew	4	Bullion Drilling
Site Preparation and rehabilitation	1	Marmota Limited

Shifts worked per day	Hours worked per day	Days worked per week
1	12	7

Using the table below, describe the equipment (size, number and contractor details) required to conduct the proposed operations.

Name	Owner/Operator	Description/capacity	Activity/purpose
Drilling Rig (RAB/AC/RC)	Drill contractor	Schramm 450WS RC Drill Rig. (35t) or equivalent	RC Drilling
Support Truck Air	Drill contractor	6x6 Man Air Truck (22t) or equivalent	Compressor and Booster truck
Support Truck	Drill contractor	8x8 Merc Support Truck or equivalent	Support truck water/ diesel
Freight Trailer	Drill contractor	TR1 – freight trailer or equivalent	For carrying drill rods, casing and PVC casing (Camp Laydown)
Landcruiser	Drill contractor	Utility or equivalent	Support vehicle for Drillers
Camper Trailer/Caravan	Marmota Ltd	Camper Trailer/Caravan	Accommodation for Marmota Staff
Backhoe	Marmota Ltd	8t Backhoe or equivalent	Rehabilitation and Site Prep
Drilling Rig (RAB/AC/RC)	Drill contractor	6x6 Toyota Landcruiser mounted drilling rig - 7m x 2m x 3m (LxWxH) or equivalent	RAB/AC/RC Drilling (Landcruiser or equivalent)
Compressor Truck	Drill contractor	4x4 Mitsubishi Canter mounted compressor truck OR 6X6 Landcruiser mounted compressor or equivalent	6X6 Landcruiser mounted compressor or equivalent Compressor Landcruiser (or equivalent) drill rig
fuel and diesel support truck	Drill contractor	Hino 13 tonne	fuel and diesel support truck for Landcruiser rig (or equivalent rig)

Low impact exploration activities

Will low impact exploration operations be conducted that are not covered by the Generic program for environment protection and rehabilitation – low impact mineral exploration in South Australia, (generic PEPR)?

No

Describe each type of low impact operations proposed.

Drilling Operations

Will exploration drilling Operations be conducted?

Yes

Fill out the below table

Other Drilling Method(s)

Drillsite preparation

If exploration drilling activities are proposed, describe the methods used to prepare sites, including vegetation clearance requirements, site levelling and digging of sumps.

PRIOR TO CLEARING PADS:

- drill holes are anticipated to be carried out along the previous drill lines, and on sections between previous drill lines, with drill pads created alongside previous or proposed tracks.
- Drill pads and clearing will be sited before commencing; Including reviewing and determining locations of heritage exclusion zones within proximity of drill locations and delineating exclusions where required.
- No tracks or drill pads will be created in drainage lines or creeks, drill sites will be relocated 50 metres minimum from creeks or drainage line if no appropriate alternative can be located the hole and access track will not be cleared and drilled.
- Tracks and Drill pads will not be created within 200m of clay pans
- Tracks and pad locations will be sited to minimise vegetation removal and will pass around larger trees and isolated vegetation.
- Drill pads will be created alongside proposed access tracks.

DRILL PADS AND SUMPS

- Drill pads will be cleared to 15m x 15m (225m²) with 2 x sumps (2.5m x 2.5m x 2.5m) for water which maybe encountered. If large amounts of water are intercepted water will be diverted to adjacent sumps or an additional sump will be excavated if needed,
- Drill pads will be cleared using raised blade clearing retaining the root stock
- The drill pad will be cleared to allow drill rig and compressor support truck to sit on adjacently on drill pad allowing access around the drill rig and compressor support truck.
- Vegetation will be stockpiled allowing re-spreading as mulch, soil protection and seed material for re-generation on completion of the drill program.
- Sumps will be sloped on one side to allow for Fauna to escape

Drillhole construction and decommissioning

Drillhole construction and decommissioning

Drill holes will be approx. 150mm in diameter and the top 3-6 metres will be cased using PVC.

Have the personnel responsible for implementing the proposed program read and understood the Earth Resources Information Sheet M21, Mineral exploration drillholes – general specifications for construction and backfilling?

Yes

Describe how drillholes will be constructed, including the casing material to be used, depth of casing, if the casing will be cemented, cementing intervals and the class of driller that will install the casing.

Drill holes will be approx. 150mm in diameter and the top 3-6 metres will be cased

When describing drillhole decommissioning requirements, include the materials to be used, stratigraphic intervals where cement plugs will be placed, if the casing will be removed and when decommissioning will occur after drilling is completed.

After completion of drilling, RC holes will be temporarily plugged/capped until such time it is decided the bulk drill cuttings are no longer required for further geochemical analysis (typically 1-3 months), the drill hole will be backfilled with drill cuttings. A plastic plug will be inserted 0.5 – 2m below the surface and backfilled with native top soil. Surface casing will be removed after hole has been backfilled with cuttings. Open sumps may be used to dispose of excess drill cutting where they will not fit back down the drill hole of origin. Cuttings will be buried 1m below surface where required. See Figure 10 for drill hole decommissioning example

Costeans and bulk sample disposal pits

Will costeans/bulk sample disposal pits be required for the proposed program?

No

Tenement	Number of costeans/pits	Size of costean (length x width) (m2)	Average depth (m)	Volume excavated (m3)	Total Volume Excavated (m3)	Total area of disturbance
There are no records to display.						

Describe site preparation methods, vegetation clearance, and safety and maintenance requirements

NA

Sample management

Describe the size of samples collected (including drilling samples and bulk sampling), collection methods, materials used when collecting the sample, sample disposal methods (including removal of sample bags), safety management and any other sample management requirements at the exploration site (e.g. tarps or matting used to contain cuttings). Include requirements for on-site geological sample management (splitting of archive samples, bag farms, core processing and storage).

Sample Collection

- For RC drilling bulk drill cuttings will be collected in large plastic bags at 1m intervals down the entire drill hole.
- From these bags, 4m composite samples will be collected in calico sample bags and submitted to a laboratory for geochemical analysis.
- surplus bulk drill cuttings will be left at each drill site until all geochemical results have been received from the laboratory to ensure no samples need to be resubmitted.
- The surplus bulk samples will then be used to backfill the holes followed by a non-degradable plug at 0.5 – 2m downhole and then topsoil backfilled to surface. The remaining bulk samples will be removed from the plastic sample bag and disposed of in a same sump as drilling.
- Plastic bags and surplus calico bags from 1m splits will be disposed of separately at a designated waste dump. All sample bags will be rehabilitated within the requested approval time monitoring for bag degradation.
- Sample material that cannot be returned downhole will be disposed in a sump.

All sample bags will be rehabilitated within 3 months following expiry of this PEPR

Access routes to work areas

Will existing tracks require upgrading and/or maintenance?

No

Detail the work required to upgrade/maintain existing tracks.

—

Will access be required across adjoining tenements?

Yes

Detail the method(s) for gaining access, and if an agreement is in place with all stakeholders. Include the total area of disturbance required (i.e. length (km) and width (m) of tracks) and provide on a locality map.

Access to site is via the Commonwealth Hill road and existing station tracks. No additional disturbance is required

Will access off existing tracks be required?

Yes

Detail the method(s) for gaining access and if vegetation clearance is required. Details of the total area of disturbance (includes drill traverses and seismic lines) required off existing tracks (i.e. length (km) and width (m) of new tracks) must be provided in the program notification.

PROPOSED LENGTH OF TRACKS (Greenewood and Mainwood) ADDITIONAL DRILLHOLES

- Phase 1 Greenewood (2025 RC) - 3.1km of tracks were cleared. The track between Campfire Bore and Greenewood/Mainwood was re-opened to facilitate drilling.
- Phase 2 Greenewood No Additional tracks are expected to be required for EL 5998 with the length of drill tracks expected to be within the 11km from the previously approved EPEPR.
- The length of tracks includes drill lines and turn arounds.
- There are two station tracks which runs North- South through the tenements which connect the main access tracks between Aurora Tank and proposed drill areas.
- All planned holes lie within areas previously drilled by other explorers, so only a minimal number of new tracks may be needed and this is not expected to exceed the 11km of already approved tracks. Track will be cleared to a maximum of 5m, with an average width of 3m

Phase 3 Greenewood Mainwood (RC) -3km of tracks and drill line to be cleared, with the length of drill tracks expected to be within the 11km from the previously approved EPEPR. Site Access via The track between Campfire Bore and Greenewood/Mainwood which was re-opened during Greenewood. Drilling

Phase 1 Golf Bore (RC) -3km of tracks and drill lines to be cleared, with the length of drill tracks expected to be within the 11km from the previously approved EPEPR. Site access via existing station tracks

Campsites and equipment laydown areas

Indicate where staff and contractors will be accommodated during the exploration program.

Staff and contractors will be accommodated at an established camp, close to Aurora Tank Prospect for Golf Bore Drilling and in Caravans/Camper Trailers at a site used by previous explorers, adjacent to Sandstone Outstation for Campfire Bore/Greenwood/Mainwood. Drilling

What is the maximum number of personnel requiring accommodation?

Is a campsite required to be established?

Yes

Provide a description and justification of the camp location (e.g. previously cleared areas etc.), and any other relevant information.

Caravans and/or Camper Trailer may need to be used for Greenwood/Mainwood, Campfire Bore and Golf Bore Drilling, it is expected that no vegetation will be cleared and camp will be set up in cleared area adjacent to Sandstone Outstation in consultation with Commonwealth Hill Pastoral Station.

What will be the total area (ha) of the campsite(s)?

0.20

Will native vegetation clearance be required?

No

What will be the total area (ha) of vegetation clearance for the campsite?

—

Describe the methods used to prepare the campsite including vegetation requirements and site levelling.

—

Will any excavations be required?

Yes

Describe the purpose of the excavation

After each campaign all caravans, tents and generators are removed from site and the toilet facilities are backfilled and rehabilitated. Shower Facilities are provided in caravans brought to site for the program, with grey water allowed to drain into a small hand dug sump and allowed to seep freely into sandy soil within 5m of the campsite, with the sump rehabilitated after each program. Toilet facilities for each campaign consist of a ~6m deep drillhole with privacy tent and field toilet seat placed above it, A new hole will be drilled and used as a toilet facility for each drill program. Due to the short duration (2-3 weeks) of individual field campaigns and the small number of people involved (max 7). If the frequency of site activities increases, leading to more permanent camp requirements an amendment to this PEPR will be made, including advice from Health SA, regarding the need for upgraded sewage and grey water treatment.

Describe the maximum volume (m3) of material to be excavated.

3.00

Provide confirmation that the proposed ablution facilities have been endorsed for use by the Department of Health or local council, where applicable.

Yes

Indicate why endorsement approval is not required by the Department of Health or local council.

Proposed infrastructure (includes caravans, tents, offices, hydrocarbon and water storage requirements etc)

Proposed infrastructure	Quantity	Description / capacity
Tents/Swags	3	Fly Camping - Tent/Swags 1 to 3 Personnel in Tents/Swags as required
Caravans/Camper Trailers	4	2 -4 Caravans/Camper trailers (as required)
Water Trailer (Camp Laydown)	1	Water Storage mounted on trailer (or Equivalent)

Will laydown areas be required?

Yes

Will the laydown area(s) be located at the same location as the campsite?

Yes

Provide a description and justification of the location (e.g. previously cleared areas), and any other relevant information if required.

emporary laydown will be located at the same location as Campfire bore Camp and location will be discussed with Commonwealth Hill pastoral station to minimise impacts on pastoral activities

What will be the maximum area (ha) required for the laydown area(s)?

0.25

Will native vegetation clearance be required?

No

What will be the total area (ha) of vegetation clearance for the site?

—

Describe the methods used to prepare the laydown area including vegetation requirements and site levelling.

Will any excavations be required?

No

Describe the purpose of the excavation.

What will be the volume (m3) of material to be excavated.

—

Proposed infrastructure (includes hydrocarbon and water storage requirements)

Proposed infrastructure	Quantity	Description / capacity
Freight Trailer For carrying drill rods, casing and PVC casing (Camp Laydown)	1	TR1 – freight trailer
Trailer fitted with mobile workshop (Camp Laydown Laydown)	1	TR2- 2011 Dog Trailer
Fuel Trailer (Camp Laydown)	1	Fuel Cell mounted on trailer

Other exploration methods and/or ancillary operations

Are any other proposed exploration methods (e.g. seismic) and/or ancillary exploration operations required?

No

Describe the activity(s), site preparation, vegetation clearance, and safety and maintenance requirements.

Water supply and management

Will camp and/or drilling water be required?

Yes

Describe how and where water will be sourced for drilling, track maintenance and camping purposes (e.g. groundwater, surface water, mains). Indicate how wastewater and/or runoff water will be managed.

Camp and drilling water will be provided by onsite by water storage on Water Trailer, and will be resupplied from water Storage Tanks located at Aurora Tank Camp.
Waste water will be contained within a small sump at camp.

Will surface water and/or mineral drillholes be used as a water source/supply?

No

Indicate if a licence for water extraction/usage is required (refer to relevant Natural Resources Management water allocation plan available on the Department for Environment and Water (DEW) website).

—

Attach a copy of the licence or include a statement confirming that a licence will be obtained before the extraction and/or usage of water.

Groundwater investigation and water affecting activities

Will any water investigation (e.g. pump testing, water monitoring sites, water storage, turkey nests/dams) and/or water affecting activities, be undertaken (refer to s. 127 of the Landscape South Australia Act 2019)?

No

Describe the water investigation and/or water affecting activities, including site preparation, vegetation clearance, and safety and maintenance requirements.

Indicate if water affecting activities permits (eg well and water extraction/discharge permits) have been obtained and in accordance with the Landscape South Australia Act 2019.

—

Management of hazardous materials

Will activities be conducted in areas of known uranium and thorium mineralisation?

No

Attach Files

Expand/Collapse

File Name	File Size (Mb)	Created On	Download
No Files Uploaded			

Will any other hazardous material be encountered when exploring in the area?

No

List the types of hazardous materials and provide a management plan on how these materials will be managed.

Rehabilitation

Detail all the activities and strategies relating to the remediation of all impacts associated with the proposed exploration operations (includes exploration camps and laydown areas, tracks). Completion of rehabilitation must be achieved within 3 months after the expiry of each program notification.

Rehabilitation of drill holes from Campfire Bore (RC 2024) were completed in Sept 2025.

Marmota Staff or contractors will be used in rehabilitation activities.

Drill Pads and Samples

- For RC drilling, bulk drill cuttings will be collected in large plastic bags at 1m intervals down the entire drill hole. From these bags, 4m composite samples will be collected in calico sample bags and submitted to a laboratory for geochemical analysis.
- The surplus bulk drill cuttings will be left at each drill site until all geochemical results have been received from the laboratory to ensure no samples need to be resubmitted. The surplus bulk samples will then be used to backfill the holes.
- A non-degradable plug at 0.5 – 2m downhole will be placed into the open hole and then topsoil backfilled to surface.
- The remaining bulk samples will be removed from the plastic sample bag and disposed of in existing sumps on the hole it was drilled.
- Plastic bags and surplus calico bags from 1m splits will be disposed of separately at a designated waste dump
- All sample bags and all exploration related activities will be rehabilitated within 3 months following expiry of this PEPR and ensuring monitoring of bag degradation.
- If drill pads have been compacted by machinery, the drill holes or track will be ripped along the contour to loosen the soil.
- Topsoil which has been stockpiled will be re-spread to facilitate growth.
- Sample material that cannot be returned downhole will be disposed in a sump. Sump
- Drilling waters will be contained within sumps, with sumps back filled after water has evaporated.
- Bulk samples will be disposed of downhole with excess samples disposed of in the sump and covered with sub and topsoil in the correct order.
- excess sub-soil material will be added where possible to allowing for compaction.
- Topsoil which has been stockpiled will be re-spread to facilitate growth.

Tracks

- Will be rehabilitated to near original condition which facilitated revegetation after drilling.
- If tracks have been compacted by machinery, the drill holes or track will be ripped along the contour to loosen the soil.
- Topsoil will be respread and vegetation over the top to facilitate revegetation.
- Obstacles such as mounds, tree trunks and branches across will be used to restrict access along rehabilitated tracks off major roads and station tracks.
- Road windrow of the existing major road to be re-established and landowner to be notified tracks have been rehabilitated.

Rubbish

- All rubbish, contaminated soil or work debris will be removed after drilling and disposed of at Approved District council dump. As per sample above Sample bags will be removed after assaying has been completed, whilst monitoring for bag degradation.
- Temporary markers (tapes and pegs) will be removed

Progressive Rehabilitation

- Marmota plans to progressively rehabilitate exploration activities on a campaign basis. A maximum of 250 holes pads and sumps may be left open at a given time.

To date over 75% of the phase 1 collars pads and sumps have been rehabilitated to allow for phase 2

drilling. in addition to this approximately 1/2 of the phase 2 sumps and pad are being rehabilitated on the fly to allow for close spaced drilling during phase 2. Well under the maximum 200 holes pads and sumps will be left open at the end of phase 2 drilling.

State the estimated budget required to rehabilitate all impacted sitesState the estimated budget required to rehabilitate all impacted sites. Include a breakdown of the cost associated with each rehabilitation component

Total estimated rehab \$155,000

EL 6569 - 2024 RC Campfire Bore - Drillhole, sample bags and sumps rehabilitation was completed in Sept 2025. Tracks to remain open for future use - \$5000

EL 5998 - 2025 Phase 1 RC Greenwood - awaiting current drill results and re-collection for samples - \$35,000

EL 5998 - Phase 2 (Greenewood/Mainwood) - \$35,000

EL 5998 - Proposed Phase 3 drilling Greenwood/Mainwood -\$45,000

EL 6569 - Phase 1 Golf Bore (RC) -\$35,000

Vegetation Clearance

Will any area of cleared native vegetation be unrehabilitated after the authorised period?

No

Provide a map and description of the vegetation present in the application area, the extent of any proposed vegetation clearance and the likelihood of the presence of threatened flora.

State the estimated quantum of significant environmental benefit (SEB) to be gained in exchange for the proposed native vegetation clearance and describe how the SEB will be provided.

System

					windrow off the existing road to be re-established and landowner to be notified tracks have been rehabilitated. Logs or vegetation will be placed at the start of the closed track to prevent previously rehabilitated track being driven on. Vegetation is also respread over tracks to aid in reseedling and regrowth and to discourage access			information requested within the 'Rehabilitation' section of the annual exploration compliance report.

Severity of consequ ence (CQ)	Likeliho d of consequ ence (LH)	Enviro nment al Aspect	Rec ept or	Poten tial Impa ct	Control Strategi es	Ri sk	Outcomes	Outcome Measureme nt Criteria

Severity of consequence (CQ)	Likelihood of consequence (LH)	Environmental Aspect	Receptor	Potential Impact	Control Strategies	Risk	Outcomes	Outcome Measurement Criteria
Insignificant	Unlikely	Native Vegetation	Flora and fauna and their habitats; includes Commonwealth and state scheduled species.	Loss/modification of native vegetation and associated habitats through the clearance of vegetation.	Vegetation in this region is predominantly an open very open acacia woodland with a variable understory of Senna, Saltbush, Bluebush and other flora identified in Native Vegetation tables of this PEPR Application. Mitigation and rehabilitation strategies used to reduce disturbance to native vegetation include but are not limited to; •	Low	<p style="font-family: Arial, sans-serif; font-size: 10px"> No permanent loss/modification of native flora and fauna populations and their habitats through: • clearance • fire • other unless prior approval under the relevant legislation is obtained. </p>	<p style="font-family: Arial, sans-serif; font-size: 10px"> Maintain before, during and after photographic evidence of all exploration sites (e.g. drillsites, new track exit/entry points off existing tracks, costeans, campsites) demonstrating that: • The area and method of disturbance is consistent with that described in the PEPR. • No uncontrolled fires* occurred as a result of exploration activities. Representative photos to be included within the annual exploration compliance report.</p>

Severity of consequence (CQ)	Likelihood of consequence (LH)	Environmental Aspect	Receptor	Potential Impact	Control Strategies	Risk	Outcomes	Outcome Measurement Criteria
					Unnecessary vegetation disturbance will be avoided with implementation of methods consistent with DEM guidelines and requirements of the Mining Act 1971			
					• Site access will use existing tracks where possible in consultation with the landowners to reduce new track lengths.			
					• Clearing of understorey vegetation			

Severity of consequence (CQ)	Likelihood of consequence (LH)	Environmental Aspect	Receptor	Potential Impact	Control Strategies	Risk	Outcomes	Outcome Measurement Criteria
					n and mechanical clearing of tracks will be avoided • Where mechanical clearing is required, rootstock will be preserved. • New tracks will be sited to minimise the amount of vegetation removal and will pass around larger trees • Access track will be dog legged of existing tracks and continuous straight lines will be avoided.			

Severity of consequence (CQ)	Likelihood of consequence (LH)	Environmental Aspect	Receptor	Potential Impact	Control Strategies	Risk	Outcomes	Outcome Measurement Criteria
					• Drill sites will only be cleared if necessary, with holes sighted on non-vegetated ground if possible, • Traffic will be restricted to one track, and contractors are reminded at the start of each program and during programs as needed to stick to existing tracks and turn around areas. • Tracks that will not be used again once rehabilitated. •			

Severity of consequence (CQ)	Likelihood of consequence (LH)	Environmental Aspect	Receptor	Potential Impact	Control Strategies	Risk	Outcomes	Outcome Measurement Criteria
					ruts levelled and vegetation debris removed during clearing and topsoil respread over track area. • Rehabilitation will aim to restore the land to a stable condition that will facilitate land use consistent with that established prior to implementing the exploration program. • All vehicles carry fire extinguishers in the event of a fire. Smoking will only			

Severity of consequence (CQ)	Likelihood of consequence (LH)	Environmental Aspect	Receptor	Potential Impact	Control Strategies	Risk	Outcomes	Outcome Measurement Criteria
					be permitted on the drill site away from vegetation and all cigarette stubs will be disposed of in a designated container. Hot points on vehicles and machinery will avoid dry vegetation. Marmota will aim to position drill holes to ensure minimal disturbance to native vegetation. No trees are anticipated to be disturbed during the proposed drilling			

Severity of consequence (CQ)	Likelihood of consequence (LH)	Environmental Aspect	Receptor	Potential Impact	Control Strategies	Risk	Outcomes	Outcome Measurement Criteria
					works, with minimal damage expected to saltbush and bluebush at drill pads and along access tracks. If clearing is required, it will be done by raised bucket and will aim to leave rootstocks intact to allow for revegetation. Drill pads and tracks will be lightly scarified upon completion of works if required.

Additional Information

List any other supporting information and/or documents submitted with the application, including land access approvals/permits required to conduct the proposed exploration program.

Phase 3 Greenwood and Mainwood holes are in planning with Phase 2 results still pending. An updated map can be provided closer to drilling if required.

Phase 1 Golf Bore holes are currently being planned. An updated map can be provided closer to drilling if required.
